

20 Million Patients Benefit from da Vinci Surgery Globally

January 23, 2026 at 9:15 AM EST

Achievement reflects the dedication of surgeons and care teams worldwide to improving patient outcomes through use of Intuitive's minimally invasive technologies

SUNNYVALE, Calif., Jan. 23, 2026 (GLOBE NEWSWIRE) -- Intuitive (NASDAQ: ISRG), a global technology leader in minimally invasive care and the pioneer of robotic-assisted surgery, announced that more than 20 million patients worldwide have been operated on by surgeons using da Vinci surgical systems.

The milestone was reached as of the end of 2025, with more than 3.1 million da Vinci procedures performed last year alone. This achievement reflects the continued adoption of, and expanded patient access to, Intuitive's minimally invasive technology.

"This achievement is a direct result of the dedication of surgeons and care teams around the globe to provide the best possible care for their patients," said Intuitive chief executive officer Dave Rosa. "It underscores our belief in a future of care that is less invasive and profoundly better. For 30 years, we've worked toward that vision and we look forward to continuing our journey to help improve outcomes for patients everywhere."

With experience drawn from 20 million procedures, Intuitive is uniquely positioned to translate insights from real-world use into technology, training, and system enhancements—supporting continuous innovation and helping healthcare systems improve outcomes, reduce variability and deliver high-quality care safely and effectively.

Innovation Across Platforms and Ecosystems

Intuitive's dedication to innovation is reflected throughout its robotic-assisted platforms and their surrounding ecosystems, each designed to help physicians and hospital teams pursue their goals of improving clinical outcomes, enhancing patient and care team experiences, lowering the total cost of care, and expanding access to high-quality, minimally invasive care:

- **da Vinci 5**, the company's latest system, delivers more than 10,000x the computing power of its predecessor, da Vinci Xi, unlocking new hardware and software capabilities to help enhance patient care.
- **da Vinci Single Port (SP)** continues to expand indications globally, enabling more procedures to be performed through a single incision.
- **Ion**, Intuitive's robotic-assisted bronchoscopy platform, was used by physicians to perform more than 140,000 lung biopsies in 2025, with evidence showing its use could help patients with suspected lung cancer receive an early diagnosis.

Each of these platforms is supported by an ecosystem that includes advanced training, program optimization and ongoing collaborations that can help hospitals and care teams deliver high-quality, minimally invasive care safely and effectively.

"While we are proud of what has been accomplished to date, we are focused on the future because we believe the opportunity to impact the lives of more patients is significant," added Rosa.

About Intuitive

Intuitive (NASDAQ:ISRG), headquartered in Sunnyvale, California, is a global leader in minimally invasive care and the pioneer of robotic-assisted surgery. Our technologies include the da Vinci surgical system and the Ion endoluminal system. By uniting advanced systems, progressive learning, and value-enhancing services, we help physicians and their teams optimize care delivery to support the best outcomes possible. At Intuitive, we envision a future of care that is less invasive and profoundly better, where disease is identified early and treated quickly, so that patients can get back to what matters most.

About da Vinci Surgical Systems

There are several models of the da Vinci surgical system. The da Vinci surgical systems are designed to help surgeons perform minimally invasive surgery and offer surgeons high-definition 3D vision, a magnified view, and robotic and computer assistance. They use specialized instrumentation, including a miniaturized surgical camera and wristed instruments (i.e., scissors, scalpels, and forceps) that are designed to help with precise dissection and reconstruction deep inside the body.

About the Ion Endoluminal System

The Ion Endoluminal System is a robotic-assisted, catheter-based platform that utilizes instruments and accessories for which the first cleared indication is minimally invasive biopsies in the lung. The system features an ultra-thin, ultra-manueverable catheter that can articulate 180 degrees in all directions and allows navigation far into the peripheral lung and provides the stability necessary for precision in a biopsy. Information provided by the Ion Endoluminal System or its components should be considered guidance only and not replace clinical decisions made by a trained physician.

Forward-Looking Statements

This press release contains forward-looking statements which relate to expectations concerning matters that are not historical facts. Statements using words such as “estimates,” “projects,” “believes,” “anticipates,” “plans,” “expects,” “intends,” “may,” “will,” “can,” “could,” “should,” “would,” “targeted,” “potential,” and similar words and expressions are intended to identify forward-looking statements. These forward-looking statements are necessarily estimates reflecting the judgment of Intuitive’s management and involve a number of risks and uncertainties that could cause actual results or impacts on its operations, financial performance, and business position to differ materially from those suggested by the forward-looking statements.

These forward-looking statements include, but are not limited to, statements related to research and development of products and services, manufacturing of products, integration of products, obtaining of regulatory approvals, technical and other performance of products and services, and making products and services available to more patients and health care professionals.

These forward-looking statements should be considered in light of various important factors and involve known and unknown risks, uncertainties, and other factors, which may cause the actual results, performance, or achievements of Intuitive, or industry results, to be materially different from any future results, performance, or achievements expressed or implied by such forward-looking statements. Important factors that could cause actual results to differ materially from those anticipated in the forward-looking statements include, among others, economic conditions in the geographic markets in which we operate, changes in governmental regulations, regulatory approval priorities, resources, and timelines, regulatory enforcement priorities, governmental investigations and civil litigation, and other factors discussed in Intuitive’s Annual Reports and other filings with relevant securities regulators.

Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date of this press release and which are based on current expectations and are subject to risks, uncertainties, and assumptions that are difficult to predict, including those risk factors identified under the heading “Risk Factors” in Intuitive’s Annual Report on Form 10-K for the year ended December 31, 2024, as updated by its other filings with the U.S. Securities and Exchange Commission. Intuitive’s actual results may differ materially and adversely from those expressed in any forward-looking statements, and it undertakes no obligation to publicly update or release any revisions to these forward-looking statements, except as required by law.
